Durvesh Danve

Software Engineer II @Cohesity | AI Generalist | Python, Angular,
Javascript, AI Agents, Gen AI
Pune Division, Maharashtra, India

Summary

Software engineer building and owning production systems used by large enterprises at scale. I work across backend, frontend, and distributed systems with a strong bias toward ownership, performance, and reliability. At Cohesity, I design and ship backend and frontend systems that operate at enterprise and petabyte scale, supporting data management and protection workloads with strict latency, availability, and correctness requirements. Previously at Veritas, I delivered and owned core features for NetBackup and Alta, \$1B+ ARR platforms used by global enterprises. My scope covered low-latency services, scalable APIs, and high-performance web applications running in real production environments. I'm trusted with systems that cannot fail. I focus on:- End-to-end ownership from design to production- Clear system boundaries and clean abstractions- Measurable impact through scalability, performance, and reliability improvements I actively leverage AI as a daily engineering multiplier. I use AI tools to:- Accelerate design exploration and system tradeoff analysis- Improve code quality through faster reviews, refactors, and edge-case validation- Debug complex issues by narrowing failure surfaces and validating hypotheses- Learn new domains and technologies faster by compressing feedback loops AI doesn't replace judgment. It sharpens it. I treat AI as a co-pilot while retaining full ownership of architecture, correctness, and production outcomes. Technical focus areas:- Backend engineering: Go, Python, Node.js, distributed systems, microservices- Frontend engineering: Angular, React, TypeScript, performance-focused UI systems- Datastores and caching: SQL, NoSQL, Redis- Engineering fundamentals: system design, scalability, fault tolerance, Large Language Models (LLMs), fine tuning models, RAG, AI Agents I operate with a senior mindset: accountability, long-term thinking, and high standards. I build systems that scale, teams can trust, and businesses rely on.

Experience

Cohesity

Software Engineer - II (Member of Technical Staff - II)

December 2024 - Present (1 year 9 months)

Pune District

- Worked as a full-stack engineer owning features end-to-end across frontend, backend, and infrastructure.
- Engineered Golang-based microservices end-to-end for multi-tenancy support, designing RESTful APIs and distributed service architecture that scaled across isolated tenant environments
- Led frontend architecture decisions around component boundaries, state management, data-fetching patterns, and rendering strategies
- Optimized critical UI flows by reducing bundle size, improving rendering performance, and lowering interaction latency under heavy data loads
- Built production-grade Angular and TypeScript applications with strict performance, accessibility, and reliability requirements
- Collaborate closely with cross-functional teams to deliver roadmap-critical features across hybrid and multi-cloud environments

Veritas Technologies LLC

3 years

Software Engineer - I

September 2023 - December 2024 (1 year 4 months)

Pune District

- Delivered and owned core features for NetBackup and Alta, \$1B+ ARR enterprise data protection platforms
- Designed and maintained scalable Angular and TypeScript applications used by large enterprise customer deployments
- Improved frontend performance by ~30% through bundle size reduction and critical rendering path optimization
- Built reusable, accessible UI component libraries with Angular Material, standardizing UX across teams
- Automated Bitbucket-based code review and CI workflows, improving engineering velocity and review throughput by ~40%
- Performed architectural and code reviews; mentored junior engineers on system design and performance tradeoffs

Assoc IT Developer

July 2022 - September 2023 (1 year 3 months)

Pune, Maharashtra, India

- Developed and owned enterprise web features using Angular, TypeScript, and REST APIs in Agile delivery cycles
- Built and maintained Adobe Experience Manager (AEM) components using Java, HTML, CSS, and JavaScript
- Identified and resolved high-impact security vulnerabilities, strengthening compliance and platform reliability
- Delivered 15+ production features with consistent on-time execution

IT Developer Intern

January 2022 - June 2022 (6 months)

Pune, Maharashtra, India

- Contributed on Re-Vamping the Look & Feel of Customer Support Portal of Veritas.
- Developed Dynamic and Responsive Key Components in AEM (Adobe Experience Manager) using HTML, CSS3, JavaScript, jQuery (Front-end) and Java (Back-end)
- Adopted Agile Development Methodology using JIRA & Version control system using Git & Bitbucket.

BITS Robotech

AI Engineer intern

May 2021 - July 2021 (3 months)

Pune, Maharashtra, India

- Developed a production-ready Python-based NLP chatbot achieving ~85% intent classification accuracy
- Built an AI-driven online proctoring system supporting 1,000+ concurrent exam sessions
- Worked on model training, inference integration, and evaluation for real-world AI deployments

Education

MIT World Peace University

Master of Science, Computer Science · (2020 - 2022)

Savitribai Phule Pune University

Bachelor of Science , Computer Science · (2017 - 2020)
